GLOBAL OUTDOOR SPORTS TELEVISION

## Overview

Avail-TVN is in the process of building out a terrestrial distribution network throughout the US. The initial buildout includes a 10 Gig ring connecting the Avail-TVN Burbank SHE with POPs in LA, Chicago, New York, and Miami. Terrestrial connectivity is offered as an option for affiliates who prefer terrestrial distribution who would like to implement terrestrial distribution as a primary or secondary delivery means in conjunction with satellite delivery, or for those customers who subscribe to services only available over Avail-TVN's terrestrial network.

## Extended Linear Lineup

In addition to the linear channels available over Avail-TVN's satellite distribution network, there are over 50 channels exclusively available of the terrestrial network including both SD and HD channels.

## POP Addresses

Avail-TVN's 10 Gig fiber ring is being constructed with POPs at the following locations:

Burbank, CA	2901 West Alameda	Avail-TVN Headend
Los Angeles, CA	1 Wilshire Avenue	CoreSite Hosting Facility
Chicago, IL	350 E Cermak Road	Equinix Hosting Facility
New York, NY	111 8 <sup>th</sup> Avenue	Telex Hosting Facility
Miami, FL	NAP of Americas	Terremark Hosting Facility

## Interconnections

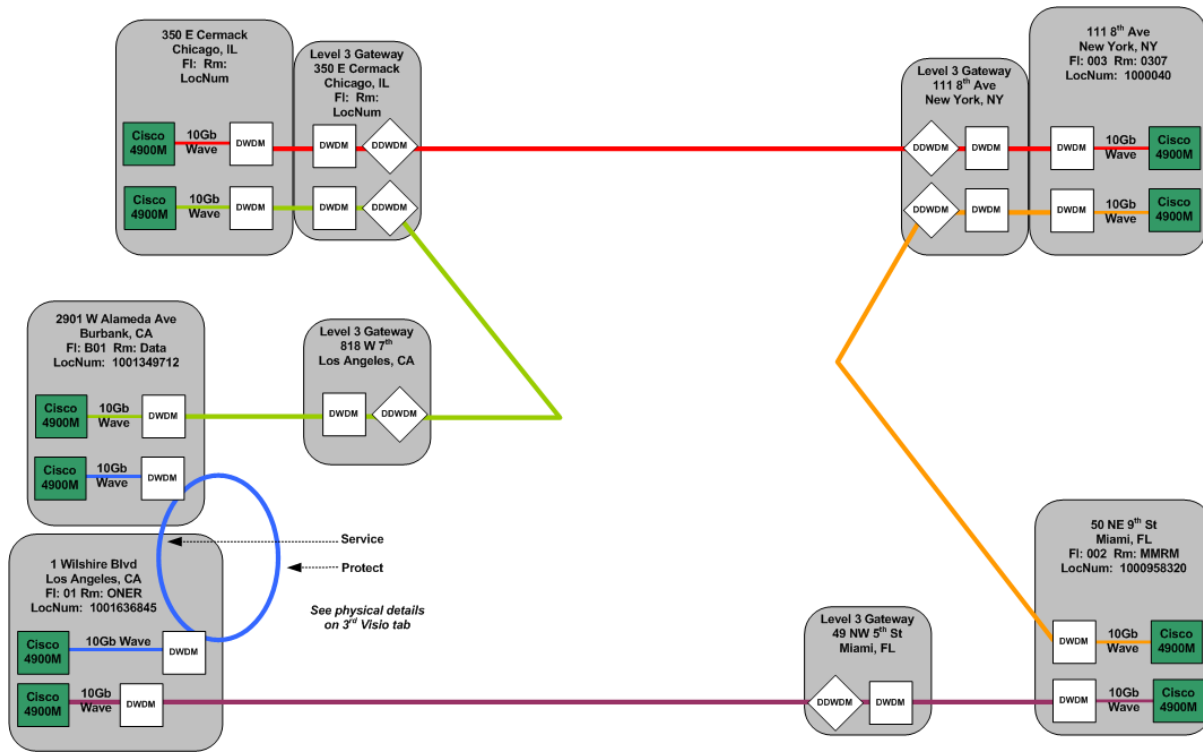

Avail-TVN is requiring affiliates to purchase interconnects to Avail-TVN's rack location at the respective hosting facilities. Avail-TVN will provide a Letter of Authorization if required for the specific location.

To ensure the highest level of availability, It is recommended that affiliates use two cross connections (one to each of Avail-TVN's routers at the facilities).

The current Avail-TVN infrastructure at the POPs support both 1 Gig or 10 Gig interconnections. GigE connections are often sufficient for affiliates with VOD or PPV services. 10 Gig interconnects are strongly recommended for linear affiliates. Service can normally be provisioned and turned up in 60 days from date of order placement.

## High-Level Network Diagram

The following is a high-level diagram which details Avail-TVN's ring architecture and a map which shows the fiber paths throughout the US.
